## Tecom Systems

Tecom Systems was founded twelve years ago for the purpose of providing the Australasian Security Industry with high quality innovative alarm panels for commercial installations.

Initially privately owned in Melbourne, Tecom has lead the way in its field and continues to provide leading edge products to cater for the most recent demands on companies security needs. Integration is a key issue in Tecom's developments, being the first to introduce Access Control as a standard function in an alarm panel. It is this type of innovation that first attracted overseas interest in Tecom Systems.

More recent innovations are integration with the company's CCTV range and a TCP/IP interface to provide multi-site companies effective monitoring options.

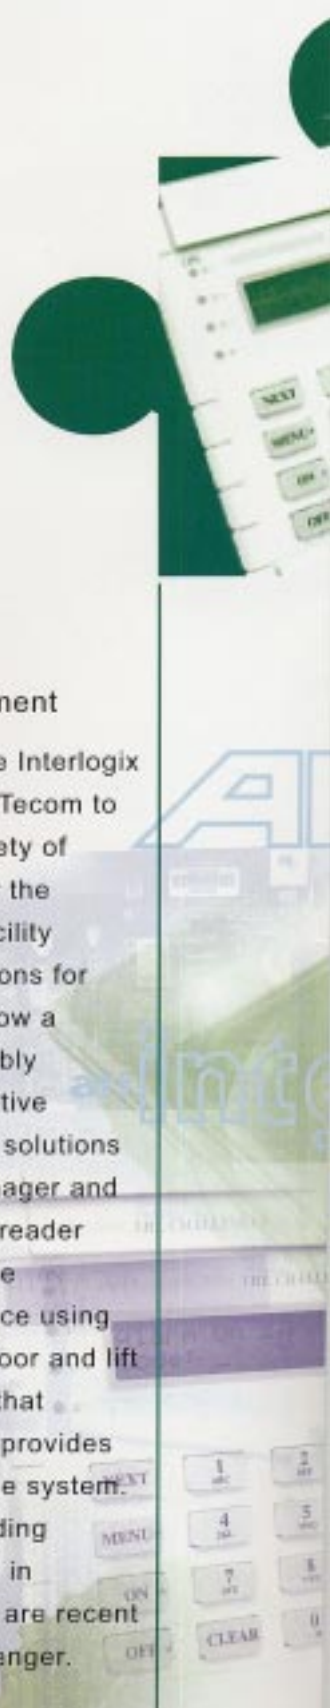

The company's strategy is to provide a complete range of products that are capable of being seamlessly integrated into an installation. This range is intended to cover Access & Facility Management, Intrusion Detection, Surveillance and Digital Video Storage and Fire Detection.

Tecom has come a long way from the fledgling alarm panel company to be part of the global Interlogix Fire and Life Safety Group, which boasts the most comprehensive range of products available in Australasia from one manufacturer.

## access & facility management

Becoming part of the Interlogix Group has assisted Tecom to provide a wider variety of products to cater for the growing needs in facility management. Solutions for asset tracking are now a possibility and are ably supported by innovative Australian designed solutions such as Access Manager and Tecom's smart card reader and programmer. The distributed intelligence using the intelligent four door and lift controllers ensures that Tecom's Challenger provides optimum usage of the system. Integration with building automation and time in attendance facilities are recent innovations in Challenger.

## Intrusion Detection

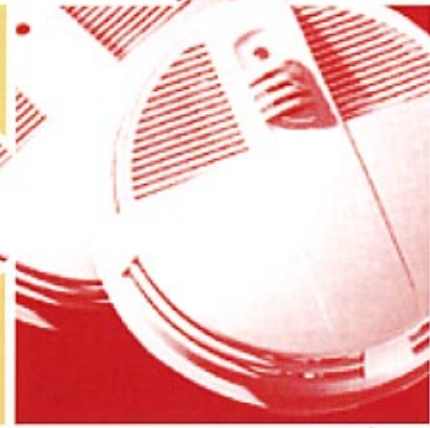

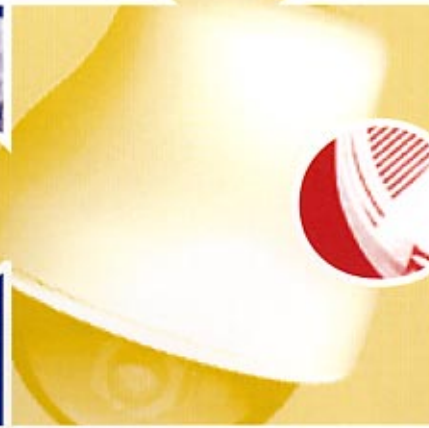

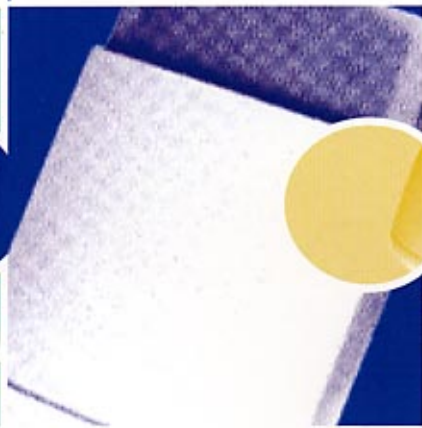

While the Challenger alarm panel is the best in the business, Tecom also boasts an extensive range of quality detectors and peripheral devices through the Aritech and Sentrol ranges. Tecom plan to provide a complete intrusion protection solution so that end users and installers alike can come to rely on a single source for high quality products as well as a single source for training on their effective use.

## Surveillance and Digital Video Storage

Now part of the Tecom Systems product range, the Kalatel range of cameras, multiplexers and digital video recorders provides an ideal platform for integration with alarm and access control panels. Existing Challenger installations can be programmed for digital recorder integration to allow varying rates of footage to be stored based on events detected by the alarm system. Integration is further enhanced when using the TCP/IP interface incorporating an RS232 output to allow the digital recorder to be interrogated via a LAN or WAN

## Fire Detection

The ESL range of smoke, gas and heat detectors provides a second to none solution for further protection of lives and property when used as inputs on a Challenger alarm panel.

## Product range

### Access and Facility Management

- Access Control Panels
- Smart Cards
- Smart Card Programmers
- Smart Card Readers
- Proximity Card Readers
- Magnetic Reed Switches
- Intelligent Four Door Controllers
- Intelligent Lift Controllers
- Asset Tracking
- TITAN Gold software for photo ID cards
- ARES software for real time graphics on large sites

### Intrusion Detection

- Alarm Panels
- Communications Receivers
- PIR Detectors (Fresnel and Mirror Optics)
- Glass Break Detectors
- Seismic Detectors
- Magnetic Reed Switches
- Active Infrared Beams
- Radar Detectors (Dual Technology)

### Surveillance and Digital Video Storage

- Cameras
- Dome Cameras
- Multiplexers
- Digital Video Recorders

### Fire Detection

- Smoke Detectors
- Heat Detectors
- Gas Detectors
