

***Our experienced customs specialists offer a variety of brokerage services to meet the changing needs of importers and exporters***

## ***Customs Brokerage***

Curlett Cannon & Galbell provide an efficient customs and clearance service for all types of products by airfreight and seafreight. Shipping goods and clearing customs is a complex process.

We offer our resources to help your business to be successful and keep you updated on the important things you need to know. We highly recommend that you seek our advice and information on a range of import/export issues that may be affecting your business.

We can make a formal application for tariff advice to confirm tariff item and concession eligibility. We can also assist in the preparation of applications for Enhanced Project By-Law Scheme (EPBL/EPBS) that is available (for some industries) for imported items with a project value in excess of A\$10 million.

Our licensed custom brokers are highly skilled in the interpretation of legal requirements that can reduce or remove duties and taxes on imported goods.

With a full knowledge of the Australian system, our brokers are familiar with systems in other nations with whom we trade. Our experienced brokers are ready to assist with your classification, tariff concession and GST issues.

### **What we do to minimise client costs:**

- Determine the appropriate classification for the product that attracts the lowest amount of customs duty
- Provide tariff and shipping advice on request
- Prepare and lodge tariff concession applications and EPBLs
- Facilitate Australian Customs and Quarantine requirements
- Prepare and lodge drawbacks and duty refunds as required
