## **New patient – First consultation: currently \$87**

The first visit at our practice is all about **YOU** as we look to find the cause of your problem. For many people, pain or stiffness has been an ongoing issue for a long time, often making it difficult to determine the exact cause.

On top of five years of intensive University study, our Chiropractors complete in house training, allowing them to assess and determine exactly where your pain is and what may have caused it.

**This is for:**

All new patients to our clinic

All patients we have not seen in 3+ years

**The first consultation includes:**

**Digital postural analysis:** state of the art software helps us evaluate where possible misalignment or postural distortions are located and what extra pressure they may be placing on your body and spine.

**Musculoskeletal assessment:** this is specific testing designed to identify the exact problem segments in your spine and what impact it may be having on the rest of your body and health.

**Nerve and muscular testing:** the nervous system controls the rest of your body and is closely related to the spine.

**Body balance testing:** this is reproducible testing that sets a baseline of how your body is going and gives an idea of what we need to improve.

**Referral for any additional testing:** if required, our Chiropractors may look at getting other tests done. Testing may include the following: postural series x-rays, MRI/CT scan, ultrasound, etc (bulk billed where possible\*)

**Chiropractic adjustment:** we generally will adjust on the first visit provided it can be performed safely. In some cases, our Chiropractors may wish to look over all results to understand your problem thoroughly prior to any adjustments.
