- Mining
- Defence
- Automotive
- Marine
- Residential

Rhino Linings, the Experts preferred choice for premium protective coatings!

*The Leaders in the Protective Coatings Industry Since 1988.
Products and Service The Experts Trust!*

About Our Company

Since 1988 Rhino Linings has been recognised as the World's #1 spray applied premium protective lining system for the automotive and industrial vehicle markets.

What is not so well known is that Rhino's premium substrate protection systems also provide superior solutions for waterproofing, abrasion, impact, corrosion, containment and chemical attack problems in over 80 countries around the world.

Being the manufacturer of a range of high grade protective products (both spray and hand applied depending on the requirement), we offer unbiased, superior, cost effective solutions.

We don't just formulate and manufacture superior protective systems, we also design and manufacture a range of specialised application equipment, along with training and supporting our Australasian network of applicators. The technical advantages this brings to you as a customer are significant and cannot be matched by competing importers and distributors.

With applicators in over 80 countries, Rhino Linings has been involved in protecting billions of dollars' worth of assets both within the Defence, Mining, Construction and general Industry worldwide.

If you want to cut through the sales and marketing blurb and want honest, unbiased, expert advice then there is only one company you should call – Rhino Linings Australasia Pty Ltd.

Who We Are

Since 1988 Rhino Linings has been providing superior protective coating solutions and since the mid 1990s Rhino Linings Australasia has been formulating and manufacturing superior pure polyureas, modified polyureas, polyurethanes, polyaspartic & epoxy coatings, primers and aliphatic top coat systems.

Our team of highly trained technicians and sales staff have worked on major projects all over the world and have industry leading experience in the correct use of our application equipment and lining systems.

Our ISO 9001 certified testing laboratory ensures our products remain at the leading edge of technology.

Applicators have received in-house training on equipment and application techniques. They understand all aspects of substrate preparation, equipment operation and subsequent application procedures. As a result, they are highly experienced in the application of Rhino's industrial protective coatings such as polyurethane's, polyurea's and epoxies for tank and bund linings, waste water treatment plants, roof tops and a vast range of coatings for both internal and external surface applications. Further, Rhino Linings Applicators receive a level of technical, product and application support unsurpassed in the industry.

The spray equipment used allows the Applicators to cater to a wide range of work and unexpected demands in workload.

FOUNDED IN 1988

Rhino Linings was founded in USA and has been operating in Australia since 2000

AVAILABILITY

Being the manufacturer, Rhino Linings has the agility to supply and distribute our products throughout Australia and SE Asia.

QUALITY ASSURANCE

3rd party certification to ISO 9001 ensures that Rhino Linings holds quality at the forefront of our culture and priorities.

Services We Offer

We specialise in a variety of high and low pressure, 1:1 and 2:1 mix ratio, polyurea, polyurethane and polyaspartic protective coatings with unique physical properties and chemical advantages to meet the requirements of virtually any application or substrate. Our primary strengths are...

- Protective Coatings Application
- Tank & Bund Linings
- Primary Containment
- Secondary Containment
- Water and Waste Water Solutions
- Industrial Coatings
- CIPP (Cure In-Place Pipe) Trenchless Pipe Repair
- Engineering Support
- Waterproofing Solutions
- Corrosion Control
- Impact Protection
- Abrasion Protection
- Defence Applications

Rhino Linings coatings provide a durable monolithic, protective barrier that are used to increase the life of a variety of automotive, military, industrial and commercial materials that are applied to many different substrates.

Rhino Linings range of premium linings and coatings conform to any shape and can be built up to any thickness in one application. Being a rapid curing product, recommission times are minimal. Rhino Linings products are engineered to last ensuring your equipment or assets are protected from most hazardous field conditions.

Rhino Linings coatings tenaciously adhere to virtually any substrate including steel, wood, fibreglass, concrete and rubber. They provide a strong, seamless, impervious flexible protective lining that is far superior to our nearest competitors.

The products are environmentally friendly being solvent free (Zero VOC's) and are AQIS and USFDA compliant. Rhino Linings products also meet stringent United States EPA secondary containment regulations and are CSIRO certified for use in potable water applications.

Today, a growing number of National and International Rhino Dealers offer our specialised formulations, comprehensive system packages, practical experience and professional support, all elements necessary to create mutually-successful, long-term business relationships.

Innovation Through Superior Systems & Technology

Since the company's inception in 1988, the mission of Rhino Linings Corporation ("Rhino") has been to develop top-quality proprietary, high performance polymers based on polyurethane, polyurea, polyaspartic and epoxy formulations.

Rhino takes pride in developing protective coatings products that continue to dominate the protective coatings market for automotive, military, mining, construction, industrial, commercial and retail applications. As a result of this success, Rhino has formed several strategic divisions including Rhino Vehicle Protection, Rhino Industrial, Rhino Defence and Rhino Flooring.

Recent blast mitigation trials conducted under the instruction of the US Military have highlighted the superior qualities of the Rhino Linings fire resistant coatings. The incredible strength combined with the flexibility of these unique purpose designed Defence linings help to absorb the blast shock waves and reduce the damage caused to vehicles, structures and personnel.

Rhino Lining's proprietary Blast Mitigation formulations also assist in reducing shrapnel damage and can provide long term protection for automotive and flooring applications.

Rhino Linings products also provide excellent options for noise abatement and vibration dampening.

Traditional paint like coatings cannot match the flexibility and strength of Rhino Linings.

Due to Rhino's strong brand presence and expansion of company divisions, the company has continued to experience solid growth with each passing year.

Safety Culture

Rhino Linings values the health and safety of its staff and network of Rhino Dealers and Applicators. Within our Head Office and Manufacturing Department, we focus on a commitment-based safety environment where safety is everyone's business. The safety process is an integral part of our business operation and fundamental to our ongoing business success.

We are committed to providing a safe and healthy work environment for staff, visitors, clients and members of the public. Our team undergoes regular specialised training and verification of competency activities.

Rhino Linings Technical Staff are required to undertake tasks and compliance including Working at Heights, Construction Industry induction (Blue/White Card), Elevated Work Platform Use, Confined Space Entry, Emergency Response, First Aid and are trained accordingly depending on the individual requirements of the project.

Rhino Linings also employ an independent company to implement and monitor our Health and Safety Corrective Action Plan. This ensures Rhino's exemplary Workplace Health and Safety Record remains so, by conducting regular audits and updating our Workplace Health and Safety Policy as required.
