

Governance and Risk Management

- Create & implement processes for security audits, penetration-tests, vulnerability assessments, data classification.
- Conduct security threat and risk evaluation of software & systems installed in client's networks.
- Mentor & train on information security awareness and practice.
- Lead information security programs.

Security Architecture and Design

- Document and review security architecture to facilitate vulnerability analysis, identify what assets require protection and design of appropriate security measures (IDS, Firewalls, secure protocols, access controls and use of cryptography where required).
- Understand network vulnerabilities, establish secure communication channels.

Operations Security

- Recommend & define preventative, mitigating, & compensating controls to ensure ISO 27001 alignment.
- Install & maintain security infrastructure.
- Control Systems Cyber security.
- Enhance Proxy, firewall, & inbound e-mail security & robustness
- Configuration control.

Business Continuity / DR Planning

- Develop scripts to maintain & backup key security systems.

Investigations and Response

- Assist incident response & recommend corrective actions via forensic recovery & analysis.
- Create procedures & policies for incident management.
- Manage process for computer security incident response.
- Kill Chain analysis.

Access Controls

- Determine and implement access control requirements and evaluation by penetration testing.
- Develop access-controls, Identity management & security related policies.

Key Panels

- Telstra Professional Services.
- Victorian State Government eServices.
- Defence Materiel Organisation Support Services (DMOSS).
- Defence Industry Security Panel (DISP).
