

What Makes Us Different

Our company focus

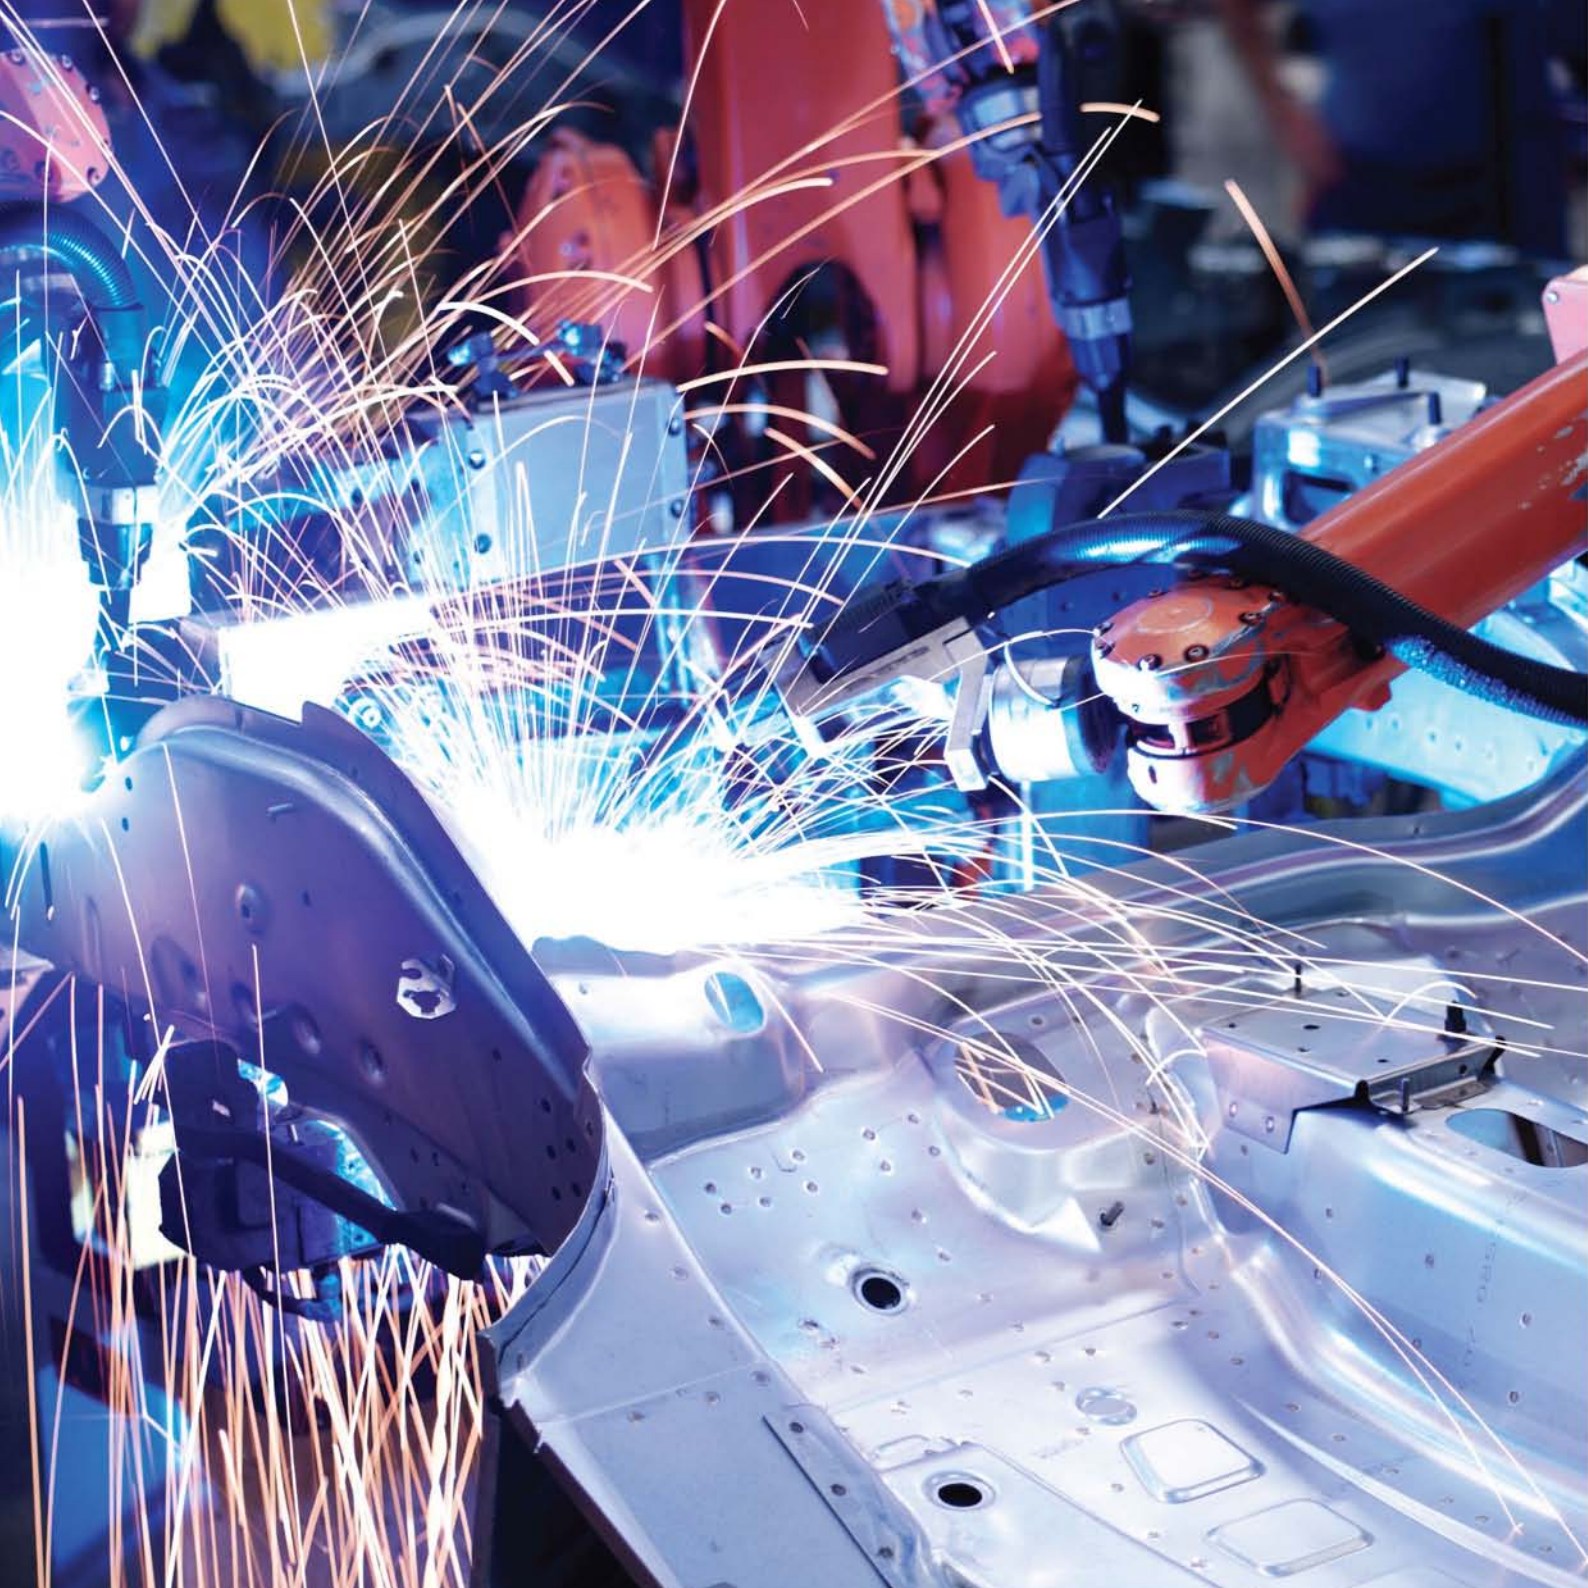

At RASM Australia our focus is on you – because you are the person who understands the challenges your company faces every day. An industrial automation solution can be found only by first understanding your business and this is where your knowledge becomes invaluable. We will work closely with you to analyse the particular automation problem you are facing and then continue to work with you throughout all stages of the project.

Finding a solution

We believe in solution-based engineering, looking at the application as a whole and making sure that the automation solution we provide is going to work for you. That means asking the right questions to get the right information. The final automation solution will emerge once all of the information has been gathered, and our end goal is a simple, cost-effective and reliable solution that saves you time and money.

Local support for the industry

We are a South Australian based business providing solutions to the industry. Our aim is to support local businesses in their automation investments but still have an Australia wide focus. This is achieved by ensuring our customer service exceeds expectations and our solutions are industry leading and competitive on the National and International market.

Providing Unique, Tailored Solutions

Robotic Automation

Robotic automation is used by many industries to improve quality, increase production and liberate manpower. Robots give you not only the flexibility to perform a variety of tasks, but also unmatched precision and repeatability. Robotic systems are robust and reliable, saving you time and money.

- Pick & place robots
- Assembly cells
- Palletising robots
- Welding automation
- Robot tooling, jigs & fixtures

Industrial Automation

Industrial automation is now almost essential for any company, in order to meet stringent quality requirements, cycle times and production output targets. The most common automation benefits arise from the ease of operation and interaction with automated machinery; the removal of repetitive and monotonous tasks; and an increase in product quality control.

- Special purpose machinery
- Machine upgrades & retro-fits
- System integration
- Motion control
- Vision systems

Machine Safety

Machine safety is a fundamental part of automation in the workplace, and is becoming ever more critical. Our primary focus is to ensure that you and your people are safe in any workplace. We will work with you to devise a custom safety solution for your machine or automation system.

- Risk assessments, as per AS4024.1
- Safety system design
- Safety system installation
- Safety system testing & verification
- Safety system upgrades & retro-fits

Consultation

Robotics and machine automation are highly specialised fields, and reliable support from an automation expert is always advisable. Sometimes you need some help with the finer details of an automation project, or you just need someone to help you make the right decisions.

- Automation concepts
- Detailed designs
- Machine fabrication & assembly
- PLC, HMI and Robot programming
- Installation & commissioning
- Planning & project management

Your Team Leaders

When you contact RASM Australia you talk directly to those who own the business. We take pride in the quality of work we produce, and this pride is reflected in the way we operate. A working relationship with you is a priority: together we can create the best automation solution possible, to help take your business to the next level.

Eric Beins
Solutions Engineer

Eric brings a wealth of experience in automation and robotics from around the world. His expertise across diverse applications ensures that the solutions we provide are simple, robust and effective

Looking For A Solution?

Automation transforms both productivity and profits when implemented carefully - with a firm grasp of commercial goals. We work with many different businesses in South Australia and beyond to create solutions that turn ideas into reality.

- Develop robotic applications for your workplace
- Solve challenges with your current machinery or equipment
- See how automation can improve your processes
- Improve the safety of your machinery or workplace
- Outsource your current automation work
- Ask a question about robotics or machine automation

Please contact us for a no-obligation appointment, so we can sit down with you to discuss your idea and suggest the best way forward.
