SCREENING FOR BATH SALTS (MDVP)

Bath Salts is one of many of the latest range of designer drugs that CMM Technology™ can screen for.

MDVP (3,4-methylenedioxypropylvalerone) otherwise known as Magic, Super Coke, Peevee and most commonly as "Bath Salts" is a designer drug that has been reported in alarming numbers in recent times.

Because of our experience and close association with leading authorities in this field, CMM Technology™ are able to offer an outstanding service at a fraction of the cost being charged by other service providers. We are backed by the very highest level of toxicology support (NATA accredited laboratory).

CMM Technology™ can ensure screening for the largest range of synthetic compounds (identified in Australia to date) using a methodology that has been rigorously tested against reference standards – followed by LC/MS confirmation of initial results.

SCREENING FOR SYNTHETIC CANNABINOIDS

CMM Technology™ has a vast experience in delivering solutions for the screening of synthetic cannabis and other synthetic compounds often referred to as designer drugs.

During the past three years CMM Technology™ has reported thousands of results relating to the analysis of urine and oral fluid samples for the presence of synthetic cannabinoids on behalf of major clients.

Because of our experience and close association with leading authorities in this field, CMM Technology™ are able to offer an outstanding service at a fraction of the cost being charged by other service providers. We are backed by the very highest level of toxicology support (NATA accredited laboratory).
