

Metallurgy Pty Ltd - Metallurgy

The vision at [Metallurgy Pty Ltd](#) is to be a leading metallurgical testing facility providing quality services to clients through proper and efficient utilisation of resources. Our commitment to clients is that all work shall be conducted in a safe and timely manner, delivering bankable test work programs to schedule and to budget, in strict accordance with industry standards and within the boundaries of state and national laws.

Directors of two companies; IMO and Strategic Metallurgy have direct ownership of Metallurgy Pty Ltd. Registered in May 2011 and commencing operations in September 2011, initially to cater for clients of Strategic and IMO, Metallurgy Pty Ltd now also offers services directly to potential clients. Through these two companies, we have direct access to metallurgists, engineers (consultants) and metallurgical technicians with expertise in all aspects of extractive metallurgy including metallurgical test work programs, test work program development, scoping and feasibility studies and cost estimations.

Metallurgy Pty Ltd is a versatile metallurgical testing facility able to provide industry accepted practices as well as new and innovative methods for those clients eager to approach their work from a different perspective.

We offer on-site office, facility and technician hire to clients wishing to manage their own work, or those just wishing the freedom to directly observe the progress of their metallurgical testing work and directly liaise with the metallurgists involved. No job is too big or too small for us to provide a quote for our metallurgy services.
