MOBILE WORKSPACE SOLUTIONS

Bosston manufacture high quality canopies and service bodies for the Mining sector. We innovate economic vehicle fit-out solutions for single vehicles and fleets to increase the productivity of your workforce, enhance workflow and add value to your business.

Conditions are harsh on Australia's mine sites, demanding extraordinary performance from both workforce and vehicles. Imagine a mobile workspace in which all your tools and products are stored away safe and secure,

but are still at your fingertips just when you need them. Designed and constructed to combine minimal weight with maximum strength, the result is a Bosston that will last for years.

RELIABLE & DURABLE WORK SPACES

Bosston mobile workspaces are proven to be superior in quality and exceptional value for money. You can depend on us to deliver durable and economic mobile workspaces that stand the test of time, even with many years of constant hard use.

THE BOSSTON DIFFERENCE

DOOR OPEN SEAL

The gullwing door and unique guttering system creates a water tight/ weather proof seal on the top of the body that keeps your workspace dry when the door is open.

ROOF RAILS

Bosston roof rails are not only removable but can also be shifted to any point longitudinally without any drilling, eliminating potential water ingress. (Not included in LEC or LTM Models).

FLUSH COAMING SYSTEM

The flat canopy lip means your workplace is safer and more efficient for the loading and unloading of goods.

MULTIFIT MOUNTS

Easily transfer canopies between vehicles without compromising the high structural integrity that is associated with Bosston products. The design suits most Ute models.

INTERNAL DUAL ACTION HINGE SYSTEM

Bosston concealed, adjustable hinge system ensures all moving parts are kept out of the weather and provide extra security without compromising the external appearance.

INTERNAL BOSSTRUT SYSTEM

This system provides strength and flexibility and facilitates the creation and customization of versatile internal fit-outs without the need to penetrate external surfaces with fixings. (Not included in LEC or LTM models).

KEY FEATURES

Quality, efficiency and safety are just a few of the traits setting Bosston apart from others:

- Designed for specialised fleet requirements
- Bosston ROPS bar – a system that does not interfere with your workspace
- Large range of models suiting most single, extra and dual cab utes
- High quality aluminium construction that's lightweight and strong
- Large doors for easy access to usable space
- Painted canopies, not powder coated, for superior finish
- Internal and external Bosstrut system creating unlimited configuration of fitouts
- Weather proof seals to protect your equipment

BOSSTON MOBILE WORKSPACES

Established in 1993, Bosston is Australia's leading innovator and manufacturer of aluminium service bodies and canopies. Bosston mobile workspaces stand for accessibility, efficiency, durability and safety, whilst being supremely lightweight and stylish.

No matter what vehicles are in your fleet, Bosston offers a range of integrated and lift off service bodies, canopies, tool modules and half tray canopies for 1ton utes to 3ton light trucks. We create Bosston's that enhance your productivity and make life easier.
