

The Composite Experts

[PermaStruct](#) is the leading company for Fibre-Reinforced Plastic (FRP) in Australia. Our PermaStruct range delivers an alternative solution to traditional materials such as concrete, timber and steel. The composite material of fibre-reinforced plastic has numerous uses that are applicable to a variety of industries, including mining and construction, marine, and boardwalks and bridges.

Eliminate the costly need for maintenance and repair from corrosion and decay of traditional materials such as wood or steel. PermaStruct provides the perfect alternative as it does not conduct electricity or corrode unlike traditional building materials. PermaStruct is rapidly gaining popularity as we specialise in customising design solutions for all kinds of projects.

PermaStruct is regarded as Australasia's leading company, we are relied on for our expertise, customer service, extensive product range, and experience. PermaStruct's high quality FRP products are 60% lighter than concrete and has a life expectancy of over 50 years.

Mining and Construction

FRP Grating by PermaStruct is the ideal anti-slip industrial surface for mine and construction sites. The non-corrosive composite of FRP also makes it the ideal material for ladders and cage systems in caustic environments.

The nonconductive PermaStruct Trenches offer the ideal solutions to protect water, gas, electricity, and communications. A revolutionary, lightweight material with considerable safety improvements opposed to traditional materials such as concrete.

Marine

[PermaStruct](#) provides a sleek, and modern range of marine decking solutions ideal for pontoons, private jetties and marinas. FRP for marine decking is available in three mesh sizes and in a variety of colours and finishes. Ideal for commercial marine applications. PermaStruct have also introduced a range of PermaTimber Composite Decking and Comcrete Marine Decking. PermaTimber offers timber decking profiles that resemble timber decking without the high costs of maintenance. Our revolutionary range of Comcrete Marine Decking imitates the look, feel and durability of concrete but significantly lighter in weight and low in maintenance.

Boardwalks and Bridges

PermaStruct's boardwalks and bridges are suitable to a range of environment including parks, inland waterways, coastal, floating, fixed and coastal paths. Our FRP constructs are low maintenance and can withstand hard environments without corrosion or decay. A non-invasive foundation is used when installing the boardwalks which is ideal for preserving heritage areas.
