

Orthodontics – Smile With Confidence

Father of two, Dr Sivabalan Vasudavan, is a qualified, Specialist Orthodontist with over 10 years of experience in the industry. His advanced treatment care and expertise in orthodontics have helped many people across Perth rediscover their smiles.

Dr Siva graduated from the UWA School of Dentistry, from which he went on to work at the Paediatric Dental Department at Princess Margaret Hospital. His determination to further his knowledge led him to accept an offer from the University of Sydney. Three years later, he graduated from their Specialist Training Program and obtained a Master of Dental Science in Orthodontics. Dr Siva's advanced studies and practical experience led him to join some well-regarded organisations, including, but not limited to, the Australian Society of Orthodontists, American Association of Orthodontists and the Harvard Society for the Advancement of Orthodontics.

Naturally, Dr Siva founded [SWC Orthodontics](#) and now operates three clinics based in Claremont, South Perth and Jandakot. He treats patients of all ages, from children to adults and consistently provides the highest level of care and professionalism.

Services:

Smile with Confidence Orthodontics believe in providing you with the best solution for your individual situation. Our team have tailor made treatment plans that aim to target your specific needs and requirements. We understand that not everybody loves visiting the Dentist and that seeing us can sometimes be scary, which is why we want to make your experience as enjoyable as possible. Our clinics have some of the latest technology to help us understand exactly what you need.

Suresmile

Used in combination with 3D imaging and virtual simulations, this technology robotically bends your archwires (common for those with braces). By moving your teeth in this way, the Suresmile has been shown to reduce treatment times by more than 30%, saving you on an average 8 months off your total treatment time!

Intra-oral Scanning

This state-of-the-art technology creates a 3D, visual representation of your dentition. It's pain-free, mess-free and acts as a great guide for your specialists to develop an accurate treatment plan.

3D Facial Mapping

Perfect for young children who find it hard to sit still, our 3D Facial Mapping technology creates a high resolution image of your face so that we can better see inside and work out what you need.

Digital Radiology

Our Digital Radiology machine is designed for use in an orthodontic environment and adjusts itself for each individual patient. Our software allows your images to be viewed immediately, saving both you and our specialists' precious time.

Here at SWC Orthodontics, we work around you and fit to your schedule.

[Visit us](#) today and see how easy it is to **smile with confidence**.
