

About Us

Amanda Energy is a West Australian energy management firm leading the way in innovative energy delivery solutions. Creating alternatives to traditional systems, Amanda Energy delivers positive environmental and financial results to their clients. Coming to the realisation that grid electricity and solar solutions are quite simply better for business has allowed Amanda Energy to focus in on and perfect these methods of energy delivery.

Being an independent energy group that delivers energy to the power network in Western Australia means that Amanda Energy has the experience and infrastructure to deliver you the energy solutions that will suits your budget and business. Amanda Energy have secured licenses to supply energy to customers all across WA through the use of the 'smart meter' which gives their clients access to energy readings every half an hour so their clients know exactly what they are using.

As an energy supplier, Amanda Energy provides a list of direct benefits to their clients including cost effectiveness, personalised energy analysis and integration of DSM/Solar. In addition to this Amanda Energy is an independent WA owned company, meaning they understand what it is like to live in Western Australia and are always tracking the market so their clients know they are getting the best possible service.

Services

Wholesale Electricity

Amanda Energy is one of the most competitive wholesale electricity suppliers in Western Australia.

They understand that electricity is an important part of every business and a prominent part of the budget. Given an expected rise electricity prices each year, Amanda Energy can help you better manage your energy consumptions.

Solar Power

Amanda Energy understands that green energy is the future, and it is everyone's responsibility to manage their energy consumption with that in mind. It is due to this that Amanda Energy offers competitively priced solar energy solutions which are made to work for your business.

Offering both the purchase of a solar photovoltaic array or the option to purchase solar cultivated energy, Amanda Energy allows you to be environmentally responsible.

Demand Side Management

With the introduction of Demand Side Management, Amanda Energy saw an opportunity to provide its customers with a way to save money and achieve some environmental goals at the same time. Homes retain power, so by turning of your electricity supply for just four hours when instructed avoids black-outs and means less power stations are required. The government initiative shares its savings with DSM participating businesses, and Amanda Energy passes those savings on.

Understanding your energy needs is a vital aspect of any business. The team at Amanda Energy will work with you and your business to deliver practical and elegant energy solutions. Offering both wholesale electricity and solar power options, coupled with expertly handled demand side management, Amanda Energy can help you understand and improve your businesses energy consumption.
