

Are you getting the best deal?

on your electricity supply

Good value electricity is not just about the lowest price per unit. It's about the bottom line.

Amanda Energy is the only energy management firm that provides grid electricity, commercial solar and Demand Side Management. Our industry leading analysis of your individual electricity use will ensure a plan to setup the perfect balance for your energy requirements going forward.

Ask yourself, is your current supplier giving you the right advice or do you just get a monthly bill?

Now you have a choice.

In 2006 the Western Power monopoly on electricity supply was replaced with the Wholesale Electricity Market to give choice to large electricity users. Tight regulations and compliance ensures that every customer has the same security of supply regardless of who the customer chooses.

Amanda Energy make it easy.

Make the smart choice. Amanda provide grid electricity solutions that are simply better for business. We focus on our clients best interests. Real people committed to customer service excellence, Amanda brings a breath of fresh thinking to the energy management industry.

Save on your electricity bill with Amanda.

NETWORK 38.5% (Western Power)
Save with onsite solar generation, peak consumption, maximum demand optimisation and transmission tariff selection.

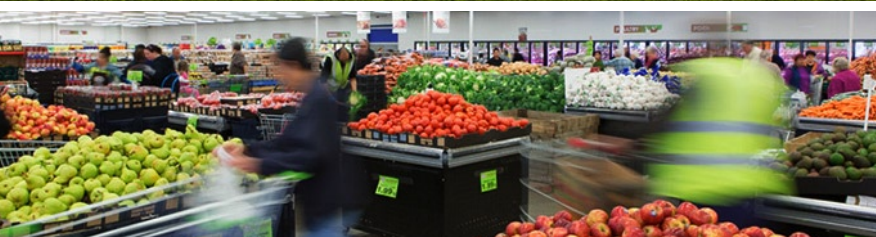

ENERGY 33%
Save with competitive rates, reduced consumption with solar, power factor, voltage optimisation and other smart initiatives.

PEAK DEMAND 22%
Save with peak consumption shaving and smart demand side management.

Renewable Energy Target 4.5%
Claim back the RET with solar and other clean energy installations.

Ancillary Services 1.5%
Maintenance and grid security.

Market Fees 0.5%
Wholesale Electricity Market management fee.

4 simple steps to a better bottom line.

Amanda Energy will perform a detailed analysis and assessment looking at your electricity consumption profile, we will then provide you with a plan and recommendation to ensure an overall reduction in your electricity costs.

Frequently Asked Questions

Q. How can Amanda Energy offer a lower price?

A. Amanda looks at your individual electricity use rather than offer a standard tariff. With your consent, we look at your consumption every 30 minutes for the last four years to design a price structure that gives you the best reward for your consumption profile. Amanda also checks if solar PV and demand side management can give further rewards.

Q. Is it just about the lowest peak and off-peak price?

A. Not always, it is about the lowest energy spend. That might incorporate median peak loads, solar PV and DSM for "bundled" electricity and expand to include power factor and contract maximum demand peak shaving for "unbundled" electricity.

Q. What do I do to make the shift to Amanda?

A. Nothing! Once you have authorised the supply agreement, Amanda does everything else. When supply transfers to Amanda, you will get a final invoice from the former supplier and new invoices from Amanda.

Q. Will my power supply be reliable with Amanda?

A. Yes. Western Power and System Management retains responsibility for the transmission, safety, quality and reliability of your electricity.

Q. Will my power be disrupted when I shift to Amanda?

A. Not normally, if you already have an interval (smart) meter fitted there will be absolutely no interruption. To fit a smart meter, Amanda will work with you and Western Power to minimise any inconvenience.

Q. Where does Amanda get the electricity?

A. Amanda generates some of its electricity from solar with the rest coming from the Wholesale Electricity Market.

Q. Will Amanda buy back any excess solar I produce?

A. Yes, Amanda can buy any surplus solar electricity you generate through a credit on your monthly account. Amanda will generally pay a higher rate than other retailers.
