

Affordable software for all industries

Who we are

At [Stems Solutions](#), we're the safety software specialists. We've been operating since 2006 and since then have learnt a thing or two about health and safety management software.

Working with Stems means working with the best, our dynamic team is the perfect balance of maturity and youth which combines experience and practical solutions with exciting new ideas and vision through fresh eyes. This in turn allows us to proficiently assist our clients when managing their business development requirements.

What we do

Our main product offering, originally designed for the Australian Mining Industry, is Safety and Risk Management. As the mining industry and industries associated with it continue to grow, so do we. Stems continuously matures to meet the evolving needs and industry standards which in turn gives us a greater range of capabilities and better suitability and experience to serve any industry.

What we offer

Customisation - We proudly offer client-end custom designed software solutions. Applications are specifically made to your unique industry standard, that facilitate the best practice with an easy-to-use interface.

Cost efficiency - We offer a cost effective solution, that follows a simple pricing model to accommodate all budgets. This combined with our comprehensive application abilities make us the right people to help your business flourish.

Mobility - Working with stems means working with flexibility. Our application can be tailored to operate in the office, on a mine site or remote location and even from your pocket. This is because our applications are hosted on cloud making us mobile; our portability means you can take Stems anywhere.

Contact the health and safety software experts today and get that one step closer to a risk free workplace!
