

Oral Surgery, which is short for Oral & Maxillofacial Surgery, is an internationally recognised medical (and dental) surgery practice. Being a highly specialised field of both dentistry and medicine, Oral and Maxillofacial Surgery requires many years of postgraduate study and significant practical experience. At Specialist Oral Surgery, our highly qualified team of expert surgeons work incredibly hard to deliver surgical solutions to areas of the teeth, facial bones and jaw. Get in contact with [Specialist Oral Surgery](#) at the Rose Clinic to ensure the highest quality oral surgery and care!

Our first priority has always been to our patients! We are dedicated to working with our patients to ensure they are comfortable.

Services

Dental Implants

Specialist Oral Surgery offers a solution for the loss of teeth. Teeth can be lost due to injury, decay or gum disease. Although nothing is as good as your natural teeth, dental implants are simply the best way to replace them. We can restore your bite and give you an easy and natural smile. With a success rate of over 90% and two decades of experience, there is no better time to get dental implants!

Cosmetic Facial Procedures

Oral and maxillofacial surgeons are trained to manage and treat facial trauma to the teeth and facial bones! Whilst a dentist will work to manage chipped and fractured teeth, orthodontic applications may be a necessity. Ensure that if the need arises, get in contact with Specialist Oral Surgery as soon as possible so that your teeth and facial structure can get the most professional and effective treatment possible.

Implantology and Grafting

Implantology and grafting is an important aspect of oral surgery as it ensures that there is enough skin tissue and bone to successfully complete oral surgery. Generally, this is achieved by placing the grafts of bones or other various tissues into the areas that they are needed. In the case there is simply not enough material, there are man-made solutions which can help. Get in contact with Specialist Oral Surgery at the Rose Clinic to find out what will work for you!

Wisdom Teeth

Teeth often fail to erupt into the mouth, when this happens, it is often the case that the tooth is impacted. Basically any tooth in the mouth can be affected and it can commonly cause immense pain. Luckily, Specialist Oral Surgery offers a fantastic wisdom teeth program that creates special solution for those suffering from wisdom teeth. From initial analysis all the way through to surgery and recovery, [Specialist Oral Surgery](#) at the Rose Clinic can take care of you!
