

Construction made simply efficient

Siteoffice.mobi® is a real-time cloud-based construction management focussed CPMS solution.

Office

Create your own customisable, cloud based office. Documentation has never been so accessible, organised and simple to manage.

Site

Live updates from the field at any time. Your program, resource usage and production will automatically be updated with real time information directly from the field.

Costs

You now have real control of your budgets, costs, forecasts and variations with real time data. Finally you have live knowledge and control of your commercial position.

Integration

Let our experienced construction engineers help implement siteoffice.mobi into your business culture. Our integration managers have delivered some of Australia's largest infrastructure projects.

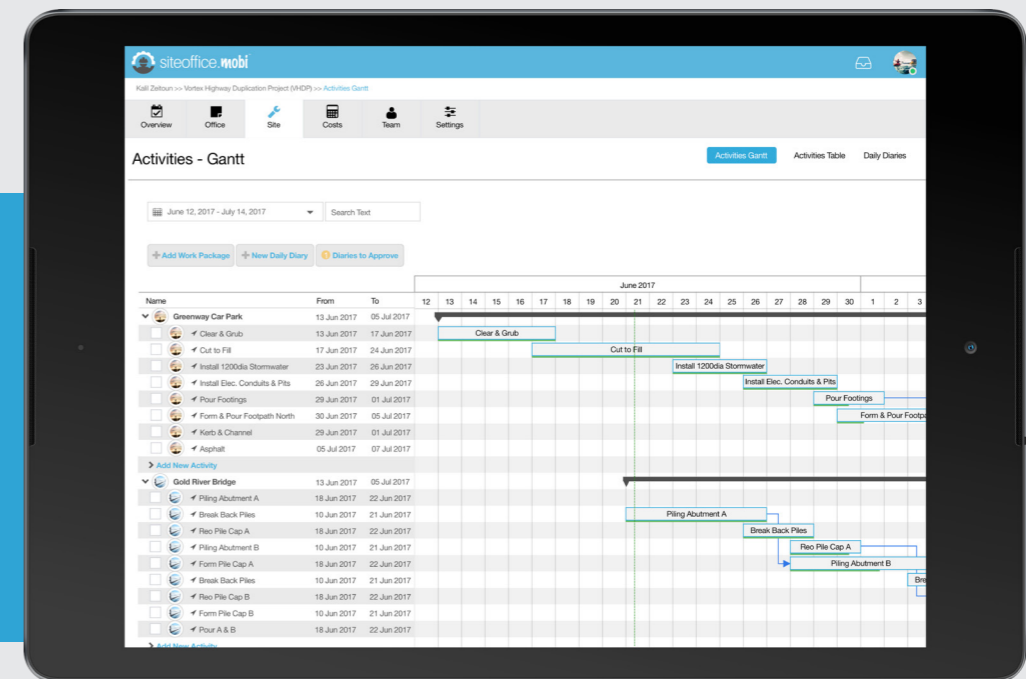

Features

Integrated Program

Easily upload your construction program to the Activities Gantt. Know the status of each activity, start and finish dates, and it's progression as it is automatically updated through the site diaries.

All your site photos can be stored against your activities and accessible from all devices at any time.

Australia's Leading Construction Program Management Software

Siteoffice.mobi® covers all aspects of the construction phase of a project, giving managers and engineers real-time cost capturing, cost forecasting, a fully integrated program, document management as well as dashboards and reports.

Mobile integration with full offline capability

Live Cost Tracking

Know your financial position 24/7. Activity costs are always up to date with live information being captured from the field. You can now review your forecast and understand your expected variance for the project each day with real time data.

Filter your cost register by date, resource type, business, docket number or even key words. For ultimate transparency bring up the relevant diary with full approval history timeline by selecting the cost item.

You will always know your costs and have real control.

Safety & Environment

All your safety and environment documentation and permits are always available on multiple devices. Your business will always adhere to and maintain its legislative requirements. Tasks can be created and assigned to ensure your safety & environmental issues are all documented and covered.

Features

Daily Diaries

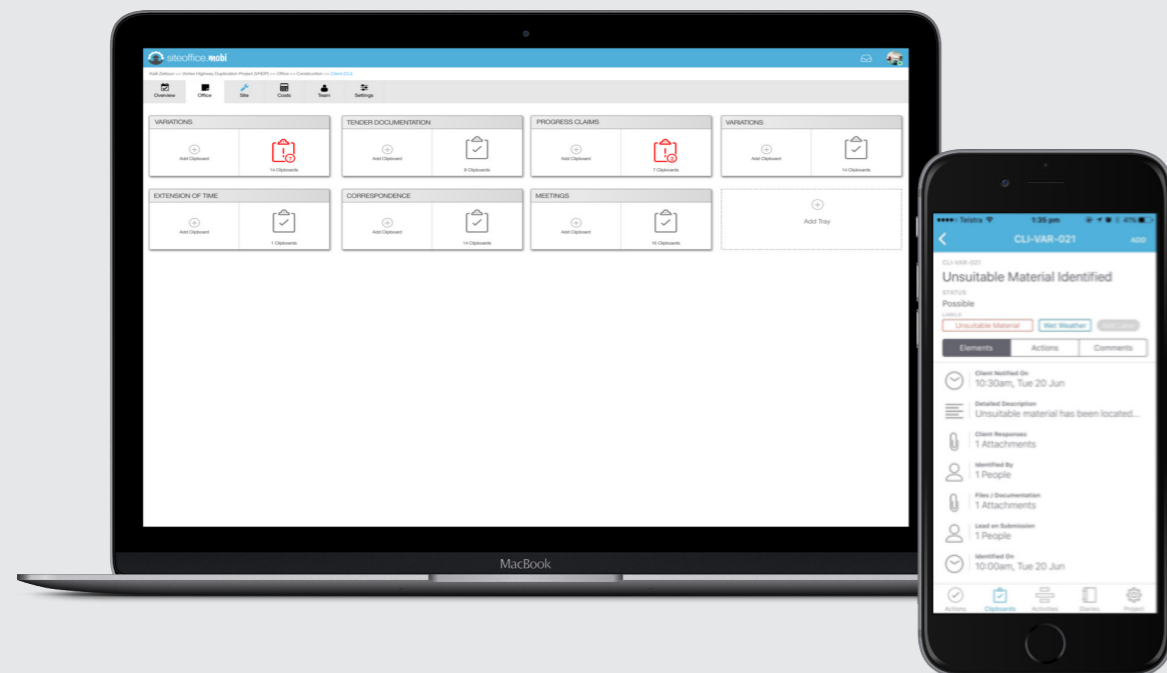

The daily diaries capture the events in a work shift across multiple activities and provides a comprehensive summary of; production rates, activity progress, resource usage and costs. Your construction program, cost register, project forecast and production, cost and risk graphs are automatically updated as a diary is submitted and approved.

You will always have insight into the performance of your activities.

Contract Management

Maintain accurate contract history timelines with the client, consultants, subcontractors and suppliers. Flag delays and variations with comments, photos, actions and due dates at any time. Set time bar reminders on variations and be secure with where you stand commercially.

Quality Assurance

Always have the latest drawings, specifications, sketches and ITPs at your fingertips. Capture and close out your defects efficiently with a comprehensive view into status, history and costs.

Quality assurance is now easier than ever with the mobile office.

Benefits

- ✓ Your opportunity to have an affordable cloud based project management software that utilises learned techniques from commercial professionals.
- ✓ Add scalability to your business. Focus on the things that matter knowing that the basics are being taken care of and know the financial position of every project you have 24/7.
- ✓ Replace the many systems and spreadsheets that are making your business inefficient. Use siteoffice.mobi to have a central delivery platform and integrated communication.
- ✓ For the first time have transparency and full control of all your projects. Proactively manage your risks with access to live data including a daily forecast review feeding into the project forecast.

Our clients

“The guys on site love using siteoffice.mobi!”

“Siteoffice.mobi has saved our business valuable time and effort, which has allowed our Directors to focus on what is important. Since adopting the software, we have experienced substantial growth and we would not be able to cope with the workload using our old systems.”

Guy Schweitzer, Director, MGN Civil

“Since implementing siteoffice.mobi we have much better knowledge of our daily costs and production quantities. The guys on site have found the mobile app to be much quicker and easier than filling out their normal paperwork and even on the remote projects with no reception it still works perfectly fine. Siteoffice.mobi gives us a much better understanding of our commercial position and as a management team we have found ways to improve our bottom line.”

Daniel Leaver, Project Manager, Swimplex

About us

We specialise in providing project management services and developing construction software.

We have a passion for improving our industry, and our software draws on the expertise of the team who combined have over 100 years of global experience in the building, civil construction and mining sectors.

The functionality of our product has been designed around our core beliefs of simplicity, efficiency and sustainability.

Engineering

Between our mechatronics, civil and building experience, our engineering team have a range of skills from automation and robotics, to managing a small building business and delivering some of Australia's largest infrastructure and building projects.

Development

Our development team use the latest in web stack technology and the primary focus is on the end user experience.

Support

Our support team comprises of a range of helpful high level professionals to provide necessary business functions for siteoffice.mobi.

We focus on the future and always search for a better way.

"Siteoffice.mobi allows us to track over 200 concurrently running construction activities on one of the largest infrastructure projects in Australia. We record site inspections, hazard reports, traffic management audits and weather records against the relevant activities in real time using the mobile app. The supervisors barely have to type any more... They dictate their notes into the relevant field saving time and capturing more information than they previously had the time for. Daily reports are generated on the web application in a matter of minutes, something which previously took hours to do. All records are kept on an accurate and secure timeline, which allows us to go back and check on progress at any point in time."

Josh Hogan, Project Controls Officer, Transport Canberra Light Rail
