COMPANY OVERVIEW

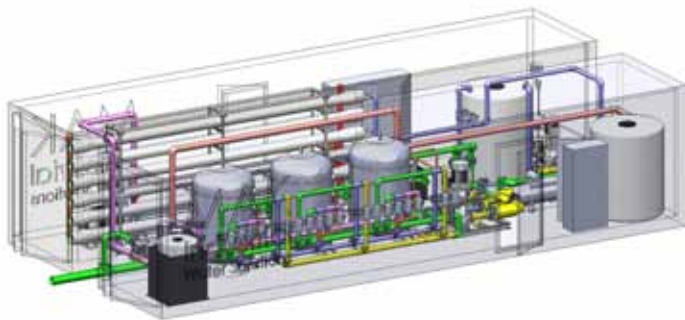

ABOUT US

MAK Water is a privately owned Australian company providing water and wastewater treatment solutions for the commercial and industrial sectors.

Founded in 2003 as a service and maintenance business, MAK Water has evolved into an Original Equipment Manufacturer (OEM), designing and building water treatment plant and equipment for the Australian and overseas markets. In 2013, MAK Water purchased industrial water equipment manufacturer, Clearmake, adding oil water separation, clarification and water recycling to its portfolio of in-house plant designs. As a combined entity, the business has been successfully operating for more than 20 years, employs over 70 people across Australia and has installed in excess of 4,000 systems throughout Australasia and SE Asia.

MAK Water fully customises water management systems and services for infrastructure projects, government utilities, general industry and the mining and gas sectors. Services include design, manufacturing, installation, commissioning, operation and equipment maintenance for all types of water and wastewater treatment systems. MAK Water also offers a range of consumables and chemicals for ongoing system performance and a complete range of standard products for small tradewaste, spill control and stormwater management projects.

MAK Water has developed a reputation for delivering superior service and high performing systems, enabling its clients to reduce operating costs and extend equipment life-cycles.

INDUSTRIES

- Civil infrastructure
- Mining + resources
- Oil + gas (on + off shore)
- Vehicle + equipment maintenance
- Remote site operations
- Marine
- Manufacturing
- Education
- Laboratory services
- Transport
- Food + beverage production
- Chemical processing
- Hospitals + health care
- Tourism
- Regional + remote water supply
- Emergency / disaster response
- Power

PRODUCTS

MAK Water offers a complete range of products and services, supporting clients from concept to completion. From an affordable standard product through to custom engineered systems and fully containerised remote site water management solutions. In consultation with your team, MAK Water will provide advice to ensure all of your regulatory requirements are met and deliver the most effective solution for your project needs and budget.

APPLICATIONS + TECHNOLOGIES

- Sea water reverse osmosis / desalination
- Brackish water reverse osmosis / desalination
- De-ionised water
- Sewage treatment
- Waste water treatment
- Process water treatment
- Ground + surface water treatment
- Potable water supply
- Water recycling
- Water harvesting
- Vehicle + heavy equipment washdown
- LNG compressor condensate
- Filtration (media, cartridge, micro, ultra, nano)
- Trade waste treatment
- Membrane bio-reactors (MBR)
- Spill control
- Stormwater management
- Sterilisation
- Sludge dewatering
- Oil / water / solids separators
- Diversion systems
- Gross pollutant traps (GPT's)
- Solids removal screens
- 24/7 remote monitoring

Client Services

MAK Water are packaged plant specialists, providing water and wastewater treatment solutions in Australia and overseas.

For more than 20 years, our solutions have been helping clients achieve cleaner water solutions that are both cost effective and regulatory compliant.

MAK Water offers customised water management systems, owns a substantial hire fleet, and provides service and maintenance for all types of water and wastewater treatment systems. A wide variety of consumables and chemicals for ongoing system performance and a complete range of standard products are also available.

MAK Water has built a reputation for delivering superior service and high performing systems, enabling clients to reduce operating costs and extend equipment life-cycles.
